OFFICIAL

-----Please replace the paragraph beginning at page-9; line 11 with the following  
amended paragraph:-----

---FIGURE 3/2 3 is a schematic illustration of the p0144-Bolys vector. The genome of the tobacco mosaic virus is diagrammatically shown to reveal replicase coding regions (126 and 183 kDa proteins), movement protein (30 kDa), bovine lysozyme (bolys) and non-native coat protein (hCP). Regulatory elements known as subgenomic promoters are shown: SP-E transcribes the mRNA for the 30 kDa gene early in infection; SP-1 transcribes mRNA encoding Bolys protein. SP-2 transcribes mRNA encoding coat protein. ---

Please add the following new paragraph beginning at page 1, line 3 after the title:

---This application is claims benefit to provisional patent application 60/240,967, filed October 18, 2000, the contents of which are incorporated by reference.---
